

Around the world, 50 million people have epilepsy, and the majority of them live in developing nations. There are roughly 10 million epileptics in India. There is a significant treatment gap. The treatment gap is caused by some factors, including a lack of awareness about antiepileptic medications, unawareness, cultural attitudes, and stigma. Thus, the Faculty of Pharmacy BBD-NIIT, Lucknow, took a step forward by organizing an engaging session about "Epilepsy." It was addressed by Dr. Atul Agarwal (Neurologist MBBS, MD - Medicine, DNB, DM -Neurology Lucknow) on 18-02-2025. It was a two-hour open interactive session in which students and faculty members interacted openly with the speaker and discussed the case studies. They shared their life experiences to explain the conditions of people in their surroundings and how they can identify and help epileptic patients. Dr. Agarwal made a tremendous effort to comprehend each person. Dr. Agarwal's session was very informative and a much-needed session for everyone, and it had a great impact. At the end of the session, Prof. Dr. Shailendra Kumar Saraf (Director) honored Dr. Atul Agarwal with a memento for his outstanding contribution to society.
