

# Akums launches Paracetamol oral suspension

As per the company the oral suspension reduces dosing frequency and volume—particularly beneficial in outpatient, hospital, and home care settings.

New Delhi: Contract Manufacturing and Development Organisation (CDMO), Akums Drugs and Pharmaceuticals has announced the launch of Paracetamol oral suspension 500mg/5ml in the Indian

market.

The oral suspension reduces dosing frequency and volume—particularly beneficial in outpatient, hospital, and home care settings, the company said.

Compared to traditional 250mg/5ml suspensions the new formulation minimises caregiver ease with a straightforward 5ml = 500mg helpful in in cases where IV access is unavailable or oral tablets are ineffective, it added.

“Whether it’s for an elderly person struggling to swallow tablets or someone managing care at home, we believe this product will make treatment simpler and more comfortable” said Sandeep Jain, Joint Managing Director, Akums Drugs and Pharmaceuticals.
